## **EXLUDUS TECHNOLOGIES LAUNCHES APPLICATION PROFILING AND REPORTING SOLUTION**

*AppProfiler™ intelligence helps improve multi-core system performance*

**MONTREAL, Dec. 7, 2010** – eXludus Technologies, the leading developer of multi-core system resource management solutions, today announced the availability of AppProfiler™, an application profiling and reporting solution that provides detailed analytics on system resources consumed by applications.

AppProfiler™ analytics provide valuable and actionable insight into the processing, memory and I/O requirements of each application. This data frees users from having to estimate resource needs and enables system managers to optimally match applications to servers and derive greater ROI from these assets.

The application-to-server optimization process is becoming increasingly difficult and important as processor core counts continue to rise. Without precise data concerning how applications consume server resources, it is virtually impossible for system managers to fully leverage the strengths of multi-core server architectures.

“Our AppProfiler™ software was designed in response to input from clients including Wall Street banks and Silicon Valley chip manufacturers,” said Dale Geldart, CEO, eXludus Technologies. “Precisely identifying the resources consumed by applications, jobs, processes and threads in a multi-core environment is very difficult. However, we have successfully developed a lightweight solution that continuously monitors and captures data that allows system managers to take tangible steps to enhance overall system and application performance,” Mr. Geldart concluded.

AppProfiler™ software is available today. The starting price is \$19,900.00 for a bundle of 100 licenses.

### **About eXludus Technologies**

eXludus is the leading developer of multi-core system resource management solutions for data center, cluster and grid deployments. eXludus’ innovative ‘coreware’ – software products that virtualize and manage processing cores – optimizes system productivity allowing more work to be completed in less time at lower cost. eXludus solutions complement existing infrastructure so customers can instantly benefit from productivity gains without need for application modifications, lengthy deployment cycles or long learning curves. eXludus has sales offices and partnerships worldwide.
