EXLUDUS TECHNOLOGIES NAMES DALE GELDART CHIEF EXECUTIVE OFFICER

Multi-core system developer positioning for significant growth

MONTREAL, Nov. 10, 2009 – eXludus Technologies, the leading developer of multi-core system resource management solutions, today announced that Dale Geldart has been promoted from Chief Operating Officer to Chief Executive Officer, effective immediately.

Dale Geldart has more than 20 years of sales, marketing and senior management experience in the high technology sector with expertise in bringing new technologies to market. Prior to joining eXludus, Dale held senior management and executive positions at Terrascale Technologies (acquired by Rackable Systems, now SGI), Alacritech, Inc., and Auspex Systems. Dale Geldart holds degrees from Boston College (MSc Finance) and Stonehill College (BSc Administration).

“I am pleased to be serving as eXludus’ CEO as we head into a period of major growth,” said Dale Geldart, CEO, eXludus Technologies. “Our MCOpt™ multi-core optimization software is substantially improving system performance and delivering excellent results in large-scale enterprise deployments. MCOpt dynamically solves the mismatch between existing applications and multi-core processors – often referred to as the ‘multi-core dilemma – allowing users to fully leverage multi-core processing power and reduce ‘time-to-result’. Additionally, MCOpt enhances server consolidation efforts as fewer systems may be required to meet a given need, which reduces strain on capital and operating budgets and complements green data center initiatives. eXludus is solving an important industry problem and I am proud to be leading this exceptional team,” Mr. Geldart concluded.

About eXludus Technologies

eXludus is the leading developer of multi-core system resource management solutions for data center, cluster and grid deployments. eXludus’ innovative ‘coreware’ – software products that virtualize and manage processing cores – optimizes system productivity allowing more work to be completed in less time at lower cost. eXludus solutions complement existing infrastructure so customers can instantly benefit from productivity gains without need for application modifications, lengthy deployment cycles or long learning curves. eXludus has sales offices and partnerships worldwide.
